

PRODUCT INFORMATION

MILD STEEL WIRE BRUSHES

DESCRIPTION

An essential weld cleaning and preparation tool with strong mild steel bristle with a smooth shaped wooden handle. Available with a variety of rows.

INFORMATION

These products are used in the cleaning of parent metal in preparation for welding, and to sweep away weld slag and spatter after welding.

Weldability offer 2/3/4/5-row wire brushes in two models; a mild steel bristled version and a version with stainless steel bristles. The latter is used to greater reduce the chances of a stainless steel weld becoming contaminated.

The long handled converging bristle models are useful for providing greater access to hard-to-reach weld areas.

NOTES

Weldability carry a wide range of wire brushes, including 2, 3, 4 and 5 row mild and stainless steel bristled models, 2, and 3 row stainless steel long handle brush and a 3-row converging wire brush.

Part numbers with suffix 'HQ' indicate that these brushes are of a higher, more durable quality and price.

ARTICLES & ACCESSORIES

Part Number	Product Description
EW0100	2 ROW - STANDARD WIRE BRUSH
EW0100HQ	2 ROW - STANDARD WIRE BRUSH
EW0103	3 ROW - STANDARD WIRE BRUSH
EW0103HQ	3 ROW - STANDARD WIRE BRUSH
