

PRODUCT INFORMATION

COIL ADAPTER

DESCRIPTION

This coil adapter is designed to sit in the centre of a wire cage spool, allowing it to fit securely to the hub. This removes the need to buy spools already equipped with hub fittings and reduces the amount of waste usually associated with the use of plastic core spools.

INFORMATION

The solid, hardened-plastic construction of this product enables it to remain lightweight yet strong.

The re-usable adaptor is becoming very popular in Europe as it helps to minimise waste and is therefore eco friendly.

Fig. A shows the kind of wire basket spool sizes that the adapter will suit.

Fig. B shows the adapter fixed to the wire cage.
