

Learn to Weld eLearning

with Weldability sif

The Weldability Sif Foundation supports the delivery of Welding & Fabrication training at centres and colleges nationwide, to industry-recognised standards. We have developed an audio-visual Welding and Fabrication eLearning tutorial for both home-based learning and to compliment hands-on college/workshop based training.

This software will guide you through the range of common welding processes and enable you to put your new skills into practice in the safety of a 3D interactive virtual workshop environment. It includes:

- Equipment Set up
- Performing Engineering Operations (PEO) module
- Health and Safety
- Step-by-step guide to each process
- Short test at the end of each section
- Mapped to NOS and EAL qualifications
- Follows industry standard pathway
- Supporting colleges and training centres in their Guided Learning Hours (GLH)
- Enables the user to gain both knowledge and experience using a virtual reality workshop environment

This software gives learners the opportunity to study each of the recognised modern welding and cutting processes and gain a good knowledge of the theory. Therefore providing the foundation to progress into further practical learning.

Additionally, time-served welders, technicians and sales people can use this tool to refresh and broaden their knowledge of the welding and cutting processes.
